

Homework Assignment 1

Matthew Tiger

September 7, 2016

Problem 3.7. Suppose $p(x, y, z)$, the joint probability mass function of the random variables X , Y , and Z , is given by

$$p(1, 1, 1) = \frac{1}{8}, \quad p(2, 1, 1) = \frac{1}{4},$$

$$p(1, 1, 2) = \frac{1}{8}, \quad p(2, 1, 2) = \frac{3}{16},$$

$$p(1, 2, 1) = \frac{1}{16}, \quad p(2, 2, 1) = 0,$$

$$p(1, 2, 2) = 0, \quad p(2, 2, 2) = \frac{1}{4}.$$

What is $E[X|Y = 2]$? What is $E[X|Y = 2, Z = 1]$?

Solution.

□

Problem 3.8. An unbiased die is successively rolled. Let X and Y denote, respectively, the number of rolls necessary to obtain a six and a five. Find:

- a. $E[X]$,
- b. $E[X|Y = 1]$,
- c. $E[X|Y = 5]$.

Solution.

□

Problem 3.9. Show in the discrete case that if X and Y are independent, then

$$E[X|Y = y] = E[X] \text{ for all } y.$$

Solution.

□

Problem 3.10. Suppose X and Y are independent continuous random variables. Show that

$$E[X|Y = y] = E[X] \text{ for all } y.$$

Solution.

□

Problem 3.13. Let X be exponential with mean $1/\lambda$; that is,

$$f_X(x) = \lambda e^{-\lambda x}, \quad 0 < x < \infty.$$

Find $E[X|X > 1]$.

Solution.

□

Problem 3.14. Let X be uniform over $(0, 1)$. Find $E[X|X < 1/2]$.

Solution.

□
